Back - end

NodeJS, Express, TypeScript, Python, NestJs and C

Database

MongoDB, PostgreSQL and SQLite

Tools

GitHub, Git Bash, Heroku, NPM, Visual Studio Code and PyCharm

BOOTCAMPS

BuddyCare

I was part of a team that built BuddyCare, a management platform that integrates a chat between psychologists and patients, with real-time psychometric tests using Artificial Intelligence. I contributed to the development of the chat, AI integration, and the creation of an intuitive interface. The experience provided me with knowledge in web development, AI, and mental health, in addition to enhancing my teamwork and communication skills.

HyperLocal

An ERP for franchise networks called Hyperlocal, where I acquired advanced skills in programming and design. I played a central role in creating a system with distinct access levels and a customized dashboard for franchise management. Working in a team, I learned to design custom solutions and used agile methodologies to ensure the quality of the platform.
